What is human menstrual cycle? - Answers.com

LAB _____. STAGES OF THE HUMAN MENSTRUAL CYCLE When a human female is born, her ovaries already contain all the immature eggs that will later mature and produce functional eggs during her lifetime. Eggs usually begin to mature between the ages of 12 and 14, when a release of hormones triggers puberty and a young woman reaches sexual maturity.

LAB . STAGES OF THE HUMAN MENSTRUAL CYCLE

This series of hormone-driven events is called the menstrual cycle. During each menstrual cycle, an egg develops and is released from the ovaries. The lining of the uterus builds up. If a ...

Stages of Menstrual Cycle: Menstruation, Ovulation ...

The secretory phase of the menstrual cycle begins after ovulation when the ruptured graafian follicle develops into the corpus luteum. The corpus luteum produces progesterone which causes the endometrium to begin secreting various substances which make the uterus more receptive to implantation of a fertilised ovum.

Menstrual Cycle Quiz | Geeky Medics

This phase also begins on the first day of menstruation, but it lasts till the 13th day of the menstrual cycle. The following events occur during this phase: The pituitary gland secretes a hormone that stimulates the egg cells in the ovaries to grow. One of these egg cells begins to mature in a sac-like-structure called follicle.
