As you continue to age through your 50s and beyond, presbyopia becomes more advanced. You may notice the need for more frequent changes in eyeglass or contact lens prescriptions. You may also find that a single prescription is no longer the best solution for all your visual needs.

#### **How vision changes as you age**

And neither tells me what you were doing immediately before you drank the coffee, although both tell me that you had started your homework at some time earlier. In the second sentence, you could have started your homework, then watched TV for a while, then had the coffee, then--as it says--continued doing your homework.
